

CYPRES AUTOMATICALLY REMINDS ABOUT THE MAINTENANCE

Another unique feature of the CYPRES 2 is showing up in the skydiving world in December for the first time.

After 4 years and 6 months, the first units will recognize to be out of their maintenance window. The display will show „next maint. NOW“ to remind that the CYPRES 2 has not yet been maintained and should be sent in.

- **The message “next maint. NOW“ will be shown automatically after the selftest, if no maintenance has been performed within 4 years +6 months after DOM until then.**
- **The message remains visible on the display for 1 minute, then the “0” appears.**

CYPRES 2 makes it very easy:

When entering the maintenance window (earliest due date 4 years -6 months after DOM) the display already shows „next maint. in MMY“, thus reminding of the upcoming maintenance in month (MM) and year (YY).

From the first notification, there are still 13 months to choose for a personally suitable date for shipping the unit. After those 13 months the info on the display changes to “next maint. NOW”.

This wide range of 13 months gives everybody the chance to have the CYPRES 2 maintained when most convenient.

We wish safe skydives with the comfort of CYPRES 2.
